

Rolls Royce on track with region's largest substation

380 kV Gas insulated switchgear building

Reyrolle Projects has completed stage 1 of the 380 KV substation it is building for SCECO near Riyadh. The gas insulated switchgear substation project, valued at £200m, is the largest project in the Rolls Royce subsidiary's 100 year history.

It is also the largest of its type ever constructed in the Middle East and one of the largest in the world. The main function of the substation will be to connect the new 1200MW power plant
