We are very pleased to be able to start a regular contribution to the RGBB Newsletter, our group is the smallest of the SIG's and we believe a very important one. If you would like to become a member please call Jeff or myself David you would all be made most welcome.

It's a fact in Saudi Arabia there is just too much work and very little time, as a consequence the group activities are very focused on work.

We are a mine of information and ready to help anyone. To give you an idea, the following are some of the day to day problems we have assisted with recently.

Our production's stopped and there is no spare available; can it be remanufactured? I have all these

electronic cards; can they be repaired in Riyadh? Who is an expert in water treatment? One of my programmable logic controllers is down; can anybody help me? I want to upgrade the SCECO power to my factory; who is the best person to see? and so on.

Always we have one project on the go, these normally take about three months to complete. They are directed towards assisting companies through the different trade missions or through private enterprise, the aim being to export their products into the Kingdom for the benefit of UK Plc.DR
