INTELLIGENT WIRE-FREE SECURITY SYSTEM OFFERS EFFECTIVE PROTECTION AGAINST INTRUDERS

An innovative wire-free security system, developed in the UK, offers homeowners and commercial property occupiers reliable and effective protection against a variety of security threats.

The AV2200 system, from Mercury Electronics, uses a compact, single unit to detect pressure changes and infrasonic sound throughout a building. It identifies and verifies attempted break-ins before entry is made – without alerting the intruder – and offers round-the-clock management of accident and health emergencies.

No unsightly wiring is necessary, and controls are simple to use. Operation is via a simple on/off key, with a radio-frequency key fob for remote entry and exit. The system can be repositioned and reinstalled quickly and without disruption.

On detecting a break-in, the AV2200 dials out to a remote monitoring station, where trained staff verify if the intruder is in the property before alerting the emergency services and activating a siren. Outbuildings, such as garages, can be protected with door sensors linked to the alarm system. Smoke detectors are supplied and there is an optional carbon monoxide detector.

A panic button, accessed via the key fob, enables users to call for assistance and have a two-way conversation with staff at the monitoring station, who can call for medical help or contact friends and relatives of the caller, if necessary.

Continuous monitoring

Occupants and pets can roam freely around the protected property without triggering the alarm. A chime indicates that someone is entering or leaving – a particularly useful feature for families with young children. The panic button, smoke detector, and carbon monoxide detector remain active and are continuously monitored, even when the system is switched off. Anti-tamper and radio-jamming protection are incorporated.

Mercury Electronics is looking to appoint distributors across the Middle East, and to assist them in setting up monitoring services

JEWELLERY DESIGNS COMBINE TRADITIONAL ELEGANCE AND CONTEMPORARY STYLE

An exclusive collection of contemporary jewellery, designed and handcrafted in the UK, blends traditional Eastern elegance with Western design detailing and materials. London-based Kyles Collection offers a range of smart, stylish items in a choice of gold, silver, bronze and jet plating finishes. Kyles Collection jewellery can be produced in over 30 different colours, making it easy to wear with a wide choice of fashion garments and accessories.

Six ranges are offered, each distinctive in style. Items in the *Bridal* range are elaborately designed, to provide the finishing touch to a wide variety of wedding outfits. The *Diamante* range is manufactured using high-quality Austrian crystals in a choice of glittering colours. The *Classic* range comprises intricate designs using the same crystals, but with a fine level of detailing. The *Pearl* range combines the classic look of pearls with colourful inset crystals.

An exclusive, “designer” range is also offered, combining bold shapes with delicate detailing in order to create extraordinary flowing designs inspired by the Kyles of Bute, a beautiful stretch of water in northern Scotland after which the Kyles Collection was named.

The company, which has planned a programme of expansion through the appointment of wholesalers and franchisees, would welcome enquiries from potential buyers interested in selling this unique range of designer jewellery.
