## Quiztime

### Q. What is it?

**Atomic Mass:**

Accepted as 55kg but may vary from 45 to 225kg

**Occurrence:**

Found in large quantities in urban areas with trace elements in outlying regions.

**Physical Properties**

Surface often covered with film of powder and paint.  
Boils at absolutely nothing.  
Freezes for no apparent reason.  
Melts if given special treatment.  
Bitter if used incorrectly.  
Found in various grades from virgin material to common ore.  
Yields to pressure if expertly applied.

**Chemical properties:**

Affinity to gold, silver and all precious stones.  
Can explode spontaneously without reason or warning.  
Greatly increased activity when saturated.

**Common Use:**

Highly ornamental, especially in sports cars.  
Can be a great aid to relaxation.  
Can be a very effective cleaning agent.

**Tests:**

Pure specimens can turn bright pink when found in their natural state.  
Turns green when placed alongside a superior specimen.

**Hazards:**

The most powerful money reducing agent known to man.  
Attempts to possess more than one considered highly dangerous.

## AND FINALLY

**A.** Now be honest with yourself. How many points did you have to consider before discovering the answer.
